INFOGRAFIC

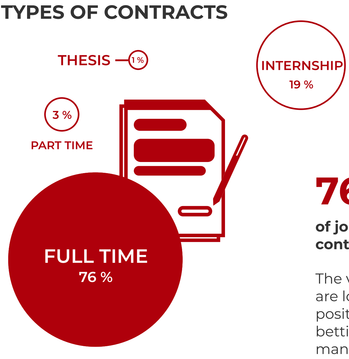
THE 3D PRINTING JOB MARKET

2021

437

job offers were published on 3Dnatives in 2021*

TYPES OF CONTRACTS



76 %

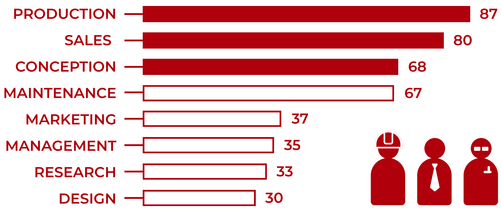
of job offers are permanent contracts

The vast majority of companies are looking for permanent positions, showing that they are betting on additive manufacturing for the long term.

TECHNICAL PROFILES

Closely followed by sales, production-oriented professions are the most sought-after by companies for the second year in a row. This can be explained by the continued industrialization of additive manufacturing and the increase in rate of production.

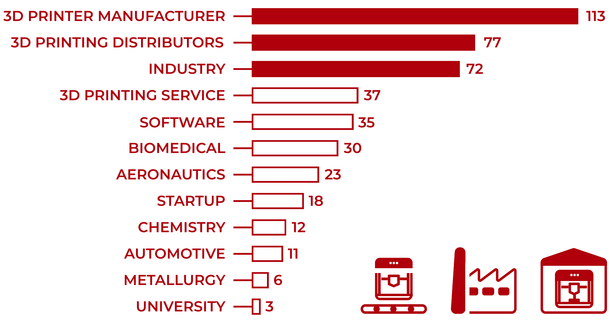
3D PRINTING JOBS



THE ADOPTION OF THE TECHNOLOGY

With the industrialization of additive manufacturing, the sectors that are recruiting are increasingly varied. This year, however, 3D equipment manufacturers are the ones who have published the most job offers. Distributors are following closely, demonstrating that they are looking to integrate additive manufacturing into their business.

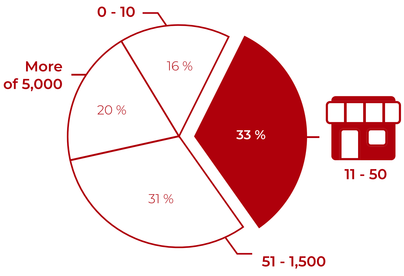
SECTORS THAT ARE RECRUITING



SMES AT THE HEART OF THE MARKET

With more than 200 job offers published in 2021, SMEs and startups are the companies that are recruiting the most in the 3D printing field. They are indeed betting on 3D technologies to increase their productivity and differentiating their offerings. Large companies are also very active in the market.

COMPANY SIZE



33 %

of job offers come from SMEs, i.e. companies with between 11 and 50 employees.
